

**PUT THE POWER OF
ARPWAVE NEUROTHERAPY
TO WORK IN YOUR PRACTICE.**

WHAT IS ARPWAVE NEUROTHERAPY?

ARWave NeuroTherapy, pioneered by ARWave Technologies, stands for Accelerated Recovery and Performance. This proprietary technology and treatment method promotes lasting changes to the nervous system's patterns, essentially creating neuroplasticity through the brain-body connection, resulting in optimal output and functionality.

While NeuroTherapy may be new to some, our evolving technology and protocols have reduced pain, improved athletic performance, and increased the quality of life for people of all ages for over two decades.

Many of your patients want to effectively manage or eliminate the pain that compromises their day-to-day activities, restricts their movements, or impedes their physical activity and athletic performance. This includes pain that's chronic, injury or lifestyle-related.

Adding ARWave NeuroTherapy to your practice enables you to offer industry leading treatments that can make a tremendous impact on your patients' day-to-day lives.

HOW IT WORKS

When you perform ARPwave NeuroTherapy on a patient you deliver a unique and proprietary electrical stimulation directly to the source of the patient's pain. The DC current works to communicate in a similar language to promote blood flow, increase strength, and improve range of motion.

ARPwave NeuroTherapy is unique in that the device, together with the proprietary protocol steps, work together to use your body's natural tendency to facilitate healing and pain relief. Additionally, the protocols can be tailored to your patient's specific needs, are easy to follow, and deliver results immediately. With a 95% success rate for the elimination of pain, ARPwave NeuroTherapy is the perfect choice for patients who need a drug-free pain reduction option.

THE DIFFERENCE IT CAN MAKE IN YOUR PRACTICE

As an ARPwave clinician, you will have a clear advantage over competing practices who don't offer this therapy.

- › Help end your patients' chronic pain
- › Enhance your patients' athletic performance
- › Speed-up your patients' recoveries from injuries
- › Help enhance and build your practice's brand
- › Achieve greater business success
- › Improve satisfaction and referrals

Utilizing the ARPwave RxBlack, NeuroTherapy can be administered in your office alongside your other treatment plans, and is designed to be symbiotic with other traditional therapy methods.

It was ARPwave Technologies' training and support that allowed me to provide quality treatments. Their devices made a positive impact on my practice and I strongly recommend clinicians consider ARPwave NeuroTherapy for their practice.

Dr. Moe

ENJOY THE BENEFITS OF ARPWAVE TECHNOLOGIES' PREFERRED PROVIDER PROGRAM.

Drive interested patients to your practice and create a new revenue source with our Preferred Provider Program. As a Preferred Provider, we'll support your practice through inclusion in ARPwave's list of Certified Providers, national social media campaigns, and marketing materials that you can use in-office to promote ARPwave NeuroTherapy. As a member you can also take advantage of special offers and dealer pricing for the RxBlack or the FlexDoctor. Ask your sales representative for details.

It was my personal experience following two-level neck fusion that led me to embrace the technology as an alternative to conventional physical therapy. I would encourage any healthcare provider to look into ARPwave NeuroTherapy.

Ted Firestone MD

THE IDEAL CANDIDATES FOR ARPWAVE NEUROTHERAPY

- › Patients looking for relief from chronic or injury-related pain
- › Those looking to move more freely and improve range of motion
- › Patients wanting to speed up recovery from an injury or surgery
- › Those looking to realize greater flexibility and injury prevention
- › Athletes at all levels who are looking to enhance their strength and overall performance
- › Those looking for drug-free treatment options

ARWave NeuroTherapy has been an invaluable tool in my quest to stay competitive in my golf career. It's helped keep me on the golf course when others with similar issues have to sit on the sidelines.

—Tom Lehman

ARWave NeuroTherapy can be performed in both an in-office setting by a clinician or at home by the patient.

Both of our devices are used in combination with our ARWave Treatment Protocols—a series of steps, processes, and application guidelines developed to assist you with administering the ARWave treatment programs. These step-by-step tutorials have been designed to meet the individual needs of each patient, whether for pain reduction, better range of motion or increased athletic performance.

HOW IS ARPWAVE NEUROTHERAPY ADMINISTERED?

RXBLACK

Clinicians have administered ARPwave NeuroTherapy with the RxBlack to over 500,000 patients.

The RxBlack is FDA cleared, and is ARPwave's most powerful device, replacing the Rx100. With additional customizable features and a more powerful electrical stimulus, the RxBlack is ideal to utilize in the office. When combined with our NeuroTherapy protocols, the RxBlack can be a valuable stand-alone or accompanying treatment option for your practice.

ARPWAVE NEUROTHERAPY BENEFITS

- › Pain reduction and management
- › Improves range of motion
- › Quicker recovery from injury
- › Reduces stress by putting the patient in parasympathetic dominance for optimal healing
- › Allows muscles to both lengthen and relax
- › Can be used for long-term recovery applications
- › Fully customizable treatments

FLEXDOCTOR

Our over-the-counter FlexDoctor provides strength, flexibility, and recovery capabilities at home and on the go.

The FlexDoctor is an ideal supplement to more traditional therapies performed within your office. It can be used in tandem with ARPwave's recovery application guidelines to assist with pain management in addition to, or between, ARPwave NeuroTherapy sessions. Small and portable, the FlexDoctor can be used at home or on the go. It can be easily administered by the patient or by a medical professional.

ARPWAVE NEUROTHERAPY BENEFITS

- › Ideal as a supplement to traditional pain reduction and performance enhancement therapies
- › Provides quicker recovery
- › Allows supplemental treatment in and out of the office
- › No prescription required
- › Small, portable, and easy to use
- › Can be used before and after exercise to build strength and recover faster
